Projects

Data Science Analysis — Course Projects

August 2025 to Present

- Built a deportation risk classifier using real ICE FOIA data to predict outcomes and interpret detention decisions, designed for nonprofit legal resource allocation.
- Analyzed 600+ polls from the 2024 election using confidence intervals and sampling distributions, identifying discrepancies between polling predictions and actual results.
- Explored NYC census tract demographics using geospatial analysis in GeoPandas to identify geographic inequality patterns
- Predicted World Happiness Index scores using economic and societal indicators, applying feature scaling to interpret variable importance

UIUC Course Explorer — Personal & Course Project

March 2026 to Present

- Built a full-stack web app aggregating historical GPA data, live section status, and professor ratings into a unified platform for UIUC course planning.
- Implemented optimal gen-ed combination finder using a backtracking set-cover algorithm and prerequisite tree visualization via recursive node traversal.
- Added advanced filtering features including GPA sorting, prerequisite-free filtering, and histogram grade distributions not available on existing tools.
